Advancing Connected Care > Products > The CAM Patch: Ambulatory ECG Monitor

Baxter

CAM Patch

The CAM Patch is a long-term ambulatory ECG monitor that has been clinically proven to identify arrhythmias. It is engineered to optimize p-wave signal capture, which enables differentiation between different types of atrial, as well as ventricular, arrhythmias^{1, 2}. The CAM's simple design allows for ease of application and its clinical portal helps streamline clinician workflow.

The Carnation Ambulatory Monitor, or CAM Patch previously branded as BardyDx, is now a part of the Baxter diagnostic cardiology portfolio.

- The CAM Report provides full disclosure for the entire wear time and differentiates significant SVTs, including AF, AFL, AT, AVRT, AVNRT, and PAC.
- The BardyDx AI engine has 96% sensitivity, 99.86% specificity, and 99.79% positive predictivity for detecting 30 seconds of AF or longer.³
- Every CAM Report is analyzed by at least two certified ECG technicians based in the United States and has a >99.5% physician agreement rate.⁴
- The CAM monitor can be uploaded using the BDx download station at the clinical site to expedite report processing.

BDxConnect is the companion patient management system to the CAM Patch

With BDxConnect, you will be able to:

- Manage full visibility into CAM Report status from data upload to report generation
- Register streamlined and efficient data entry for quick patient registration
- Review tailored report annotations and instant report generation
- Review real-time report corrections
- Customize the workflow to fit your needs

The CAM Report provides greater context for informed-decision making

Some of the CAM Report benefits are:

- Clarity on the actionable diagnosis with unique multiple field views
- Full disclosure for quick, in-depth interpretations
- Reports are provided in PDF format and available through BDxConnect
